# Succulent Bowl

This popular succulent arrangement is featured in a classy white ceramic bowl. The perfect gift that goes well in any home.

**Sedum/Sedeveria:** Hens and Chicks, Hako Chocokate Ball, Tetractinum Coral Reef and Lemon Angelina. **Senecio:** Mandraliscae "Blue". **Echevaria:** Perle Von Nurnberg, Miranda Red, Purpusorum, Affins and Pulidonis

Succulents don't like to be over watered. Let them dry out between watering. Sometimes the bathroom has too much moisture for them to thrive.

Succulents prefer full sunlight all the time. Rotate your succulents frequently (every couple weeks) so they all get adequate light. You can bring them outside when temperatures are above 15°C.

Succulents only need fertilizer once or twice a year. Once in the Spring and once in the summer.

Succulents prefer porous sandy soil that drains well.

Ideal temperatures for succulents shouldn't drop below about 15°C. They can handle heat very well.
