Tropical Planter

A selection of holiday coloured tropicals featured in a beautiful high quality, holiday themed tin planter. There are 5 different planter possibilities.

Possible varieties include: Spider plant, a polka dot plant, Ivy, Kalanchoes in red, white, yellow, or orange, Draceana Marginata, Neanthe Belle Palm, Croton, Mini Cypress, Gaultheria, and Frosty Fern.

Tropicals love indirect sunlight. Light through partially closed blinds is perfect. General maintenance includes picking off any out-bloomed flowers and soft berries to promote more growth.

Tropicals do not need lots of water. Wait until the soil on top 2 inches has completely dried before watering again.

Tropicals benefit from periodic fertilizing. They should be fertilized every 2 to 3 weeks from spring to summer and 3 to 4 weeks in the winter.

Tropicals prefer a high acidic, loose well draining soil that is high in organic matter.

Tropicals like humid warm locations. They do not do well under 15°C or in a place that is very drafty.
